Cattle Health Monitor(s)		
Supervisor(s)		
Manager(s)		
Owner(s)		
Herd Veterinarian		
Other: _____		
State Animal Health Official		
Federal Animal Health Official		

¹Abnormal findings may include changes in production parameters (decreased feed intake) or clinical signs suspicious of FMD (fever, lameness, calf death, depression, drooling, nasal discharge, or vesicles/blisters on mouth, teats, and/or feet.)
²When one Cattle Health Monitor goes off duty, they must communicate with the Cattle Health Monitor coming on duty to brief them on the herd health situation, particularly observation of any clinical signs of concern.
